Farhan Khan

New York, NY | 347-394-6235 | farhank.dev@gmail.com | linkedin.com/in/farhank0127 | github.com/farh4nk

Education

CUNY City College — Macaulay Honors New York, NY

Bachelor of Science in Computer Science | GPA: 3.99 | Dean's List *Expected: May 2028*

- **Relevant Coursework**: Data Structures, Algorithms, Software Design, Artificial Intelligence (In Progress)
- **Organizations**: MHC++ Vice President, S Jay Levy Fellow, Muslim Students Organization

Technical Skills

Languages: Python, JavaScript, SQL (proficient), Java, C++ (intermediate)
Technologies: Next.js, PostgreSQL, FastAPI, MERN, PyTorch, Cloudflare, Raspberry Pi, Claude, GitHub Actions

Experience

Cornell Tech New York, NY

Undergraduate Research Intern *May 2026 – August 2026*

- Selected as **1 of 9** researchers from a competitive applicant pool to work in the **AI & Robotics Lab** with Dr. Angelique Taylor
- Co-designed a **humanoid tabletop robot** using **Python** and **Raspberry Pi** that facilitates arts & craft circles for **20+** older adults in long-term care
- Implemented features such as **facial recognition** via **dlib vector embeddings** to map names to stored faces

The Bideshi New York, NY

Software Engineering Intern *Jan 2026 – Jun 2026*

- Collaborated across **3 teams** to engineer features and fixes within a ∼**20k-line codebase** for an e-commerce platform serving a brand with **100k+** followers
- Added **preorder flow** to allow users to sign up for preorders on restocking items using **Shopify Storefront API** and implement size guide for users to find product sizes appropriate to their measurements
- **Migrated** existing code base to modern **Next.js + Supabase** architecture, modularizing frontend UI with **React JSX** and eliminating dependency on Shopify web frameworks

Projects

Quenova | *React, TypeScript, Supabase, Cloudflare* Summer '26

- Designed, built, and **deployed** a full-stack web platform that helps researchers manage their publications, documents, to-dos, and literature in one place
- Scoped feature requirements and engineered **secure multi-user collaboration** with invite-based viewer/editor roles so research teams can co-manage projects, enforcing data privacy via **PostgreSQL Row-Level Security**
- Scaled platform to over **14,000 pageviews**, automating a **GitHub Actions CI pipeline** that blocks failed builds paired with deployment to **Cloudflare Workers**

MIRA | *PyTorch, React, FastAPI, OpenCV, Gemini, Elevenlabs* SBUHacks '25

- Collaborated with a **4-person team** to build a real-time **vision-to-audio assistive system** to help **blind and low-vision** users navigate their environment
- Integrated a **Python backend** using **FastAPI**, along with a **low-latency convolutional neural network** with object detection, positional classification, and a custom **risk-scoring model** to generate precise spoken alerts for objects and potential threats
- Optimized user **accessibility** by listening for **vocal commands** to execute corresponding snapshot or live-stream functions

Brain Invaders | *Phaser, MongoDB, Express, React, Node* HackRPI '25

- Directed a **3-person team** to develop a **MERN** and **Phaser.js** cognitive training game, driving project progress by scoping feature requirements and delegating technical tasks to junior developers
- Engineered **adaptive difficulty** algorithms and a reward/penalty system, incorporating real-time behavioral tracking such as reaction times, premature inputs, streaks, and accuracy trends
- Implemented an **analytics dashboard** to visualize player performance with **Chart.js**, allowing **authenticated** users to track their progress over time

Awards and Certifications

SBUHacks 2025: Winner in EquiTech Track | **HackRPI 2025**: Best Beginner Hack | **CodePath**: Web102 Honors
